Deferred bulls today, guaranteed passed BSE by May 1

The winter of 2023-2024 brought heavy snow and rain followed by harsh arctic temperatures. Following that our bull development pens were the muddiest we've ever seen. This combined to severely stress our fall bulls in January and early February. With stress comes a shutdown of semen production which can take up to 60 days to regenerate. The following bulls have not yet fully recovered from this event. They have improved with each semen test but today must be classified as 'deferred'.

We fully guarantee these bulls to pass and will deliver them to the buyer after they have done so, around May 1 or before.
